

# Terraform Cheat Sheet

## Installation

See <https://developer.hashicorp.com/terraform/downloads> for installation instructions for your platform.  
Then run `terraform -install-autocomplete` to enable shell autocompletion.

## Initializing Terraform

Command	Description
<code>terraform init</code>	Prepare your working directory for other commands
<code>terraform init -upgrade</code>	Upgrade modules/providers to the latest allowed versions
<code>terraform get</code>	Only download and install modules

## Making infrastructure changes

Command	Description
<code>terraform plan</code>	Show changes required by the current configuration
<code>terraform plan -out=&lt;file&gt;</code>	Write the plan to a file to apply it later
<code>terraform plan -target &lt;resource&gt;</code>	Create a plan for a specific module or resource
<code>terraform plan -replace &lt;resource&gt;</code>	Force the plan to replace a specific resource
<code>terraform plan -var '&lt;key&gt;=&lt;value&gt;'</code>	Set a value for one of the input variables
<code>terraform plan -refresh-only</code>	Inspect resource drift without updating the state file
<code>terraform apply</code>	Create or update infrastructure
<code>terraform apply &lt;file&gt;</code>	Create or update infrastructure using a plan file
<code>terraform apply -target &lt;resource&gt;</code>	Create or update a specific resource
<code>terraform apply -replace &lt;resource&gt;</code>	Force the replacement of a specific resource
<code>terraform apply -auto-approve</code>	Skip interactive approval of plan before applying

## Inspecting output values

Command	Description
<code>terraform output</code>	Show all output values
<code>terraform output -json</code>	Show all output values in JSON format
<code>terraform output &lt;name&gt;</code>	Show a specific output value
<code>terraform output -raw &lt;name&gt;</code>	Show a specific output value without quotes

## Managing state

Command	Description
<code>terraform show</code>	Show the current state in human-readable form
<code>terraform show &lt;file&gt;</code>	Show a human-readable state or plan file
<code>terraform show -json &lt;file&gt;</code>	Show a state or plan file in JSON format
<code>terraform state list</code>	List all resources in the state file
<code>terraform state show &lt;resource&gt;</code>	Show details about a resource
<code>terraform state mv &lt;source&gt; &lt;dest&gt;</code>	Rename a resource in the state file
<code>terraform state rm &lt;resource&gt;</code>	Remove a resource from the state file
<code>terraform state replace-provider &lt;from&gt; &lt;to&gt;</code>	Replace provider for resources in the state
<code>terraform import &lt;resource&gt; &lt;remote_id&gt;</code>	Import existing infrastructure into Terraform
<code>terraform state pull</code>	Pull current state and output to stdout
<code>terraform refresh</code>	(Deprecated) Update state to match reality

## Tainting resources

Command	Description
<code>terraform taint &lt;resource&gt;</code>	(Deprecated) Mark a resource to be replaced
<code>terraform untaint &lt;resource&gt;</code>	Mark a resource as no longer tainted

## Destroying infrastructure

Command	Description
<code>terraform destroy</code>	Destroy infrastructure managed by Terraform
<code>terraform destroy -target &lt;resource&gt;</code>	Destroy a specific resource

## Formatting and validation

Command	Description
<code>terraform validate</code>	Check whether the configuration is valid
<code>terraform fmt</code>	Reformat your configuration in the standard style
<code>terraform fmt -check</code>	Check whether the configuration is formatted correctly, return non-zero exit code if not

## Terraform Cloud / Remote Authentication

Command	Description
terraform login	Log in to Terraform Cloud
terraform login <hostname>	Log in to a different host
terraform logout	Log out of Terraform Cloud
terraform logout <hostname>	Log out of a different host

## Managing workspaces

Command	Description
terraform workspace list	List all existing workspaces
terraform workspace show	Show the name of the current workspace
terraform workspace select <name>	Select a different workspace
terraform workspace new <name>	Create a new workspace
terraform workspace delete <name>	Delete an existing workspace

## Other commands

Command	Description
terraform providers	Show the providers required for this configuration
terraform force-unlock <lock-id>	Release a stuck lock
terraform console	Try Terraform expressions at an interactive prompt
terraform graph   dot -Tpng > graph.png	Generate a visual graph of Terraform resources
terraform version	Show the current Terraform version
terraform -help	Show help output for Terraform
terraform -help <command>	Show help output for a specific Terraform command

## Referencing Named Values

Syntax	Description
<RESOURCE_TYPE>.<NAME>	Reference to a managed resource
var.<NAME>	Reference to an input variable
local.<NAME>	Reference to a local value
module.<MODULE NAME>	Reference to a child module
data.<DATA TYPE>.<NAME>	Reference to a data source

## Conditional Expressions

Syntax	Description
condition ? true : false	If condition is true, return true, otherwise return false

## Splat Expressions

Syntax	Description
<RESOURCE_TYPE>.<NAME>[*].<ATTRIBUTE>	Return a list of values for the given attribute of all instances of a resource

## Resource Meta-Arguments

Argument	Description
depends_on	Explicitly specify resource dependencies
count	Create multiple instances of a resource
for_each	Create an instance of a resource for each element in a map or set
provider	Specify a provider configuration block to use for this resource
lifecycle	Configure the behavior of a resource over its lifetime

## Lifecycle Meta-Argument Attributes

Argument	Description
create_before_destroy	Create the new resource before destroying the old one
prevent_destroy	Prevent Terraform from destroying the resource
ignore_changes	Ignore changes to specific resource attributes
